

Release Report Checklist

1. Validate HTML and CSS

- **Test:** Check Schedule and Contact using the W3C HTML validator and the main stylesheet using the W3C CSS validator.
- **Result:** Both HTML pages passed with no errors. CSS returned four container-query errors and eight warnings.
- **Action/retest:** Documented the CSS validator limitations. Recheck the published files after updating them.

2. Check navigation and content links

- **Test:** Follow every primary navigation link and at least five content/action links.
- **Result:** Navigation, event, booking, and contact links reached their intended pages or sections.
- **Action/retest:** No broken destinations were found in the checked links.

3. Check responsive layout and zoom

- **Test:** View Contact at narrow, medium, and wide widths, then at 200% browser zoom.
- **Result:** Contact fit at 375, 768, and 1440 pixels without horizontal overflow; passed 200% zoom without overflow or lacking content.
- **Fix/retest:** The mobile submit button was made full-width in the review copy and retested successfully. Check the published version after applying the change.

4. Check keyboard navigation and focus

- **Test:** Use Tab to move through the header, a main-content link, and the form controls.
- **Result:** Tested links and controls had visible focus outlines. Submitting an empty form focused the required name field.
- **Action/retest:** No issue was found in this keyboard spot check.

5. Run a performance diagnostic

- **Test:** Compare image file sizes to identify a practical improvement.
- **Result:** The Our Story JPEG variants were the largest image candidates checked.
- **Fix/retest:** WebP versions reduced their file sizes by approximately 64–67% and loaded successfully in the review copy. No Lighthouse score or loading-speed guarantee is claimed.

6. Check published metadata

- **Test:** Inspect page titles, descriptions, robots instructions, and Schedule social metadata.
- **Result:** All four pages had unique titles and descriptions. The schedule was missing its social page and image URLs.
- **Fix/retest:** Both URLs were added to the review copy. Corrected Schedule HTML passed validation; the public social image loaded successfully.
