Project Brief

- Purpose
 - A website that promotes an educational night out where guests can enjoy wine, spirits, beer, etc. while attending an academic lecture on an interesting topic.
- Audience
 - Academics, couples, friends, anyone interested in learning something new in a comfortable setting.
- Primary tasks
 - Guests should be able to view upcoming events, lecture topics/ speakers, find dates and times, and get info on pricing, location, and booking.
- HTML/CSS
 - Doesn't need to have any complicated animations or interactive applications.

Acceptance Criteria

Responsive Layout

- 1: Mobile Schedule Legibility
 - Statement: When viewed on screens narrower than 480px (mobile devices), the Schedule page layout must stack chronological event listings vertically into a single column with full-width buttons so that users can easily read event times and tap "Book Now" quickly.
 - Test Method: I will test this by using browser developer tools to emulate an iPhone SE screen, verifying that no horizontal scrolling occurs and that booking buttons are at least 48px tall.
- 2: Desktop Hero Grid
 - Statement: When viewed on viewports wider than 1024px, the Home page introductory section must display a two-column grid separating the background lecture imagery from the booking call-to-action text so that desktop users have a nice experience.

- Test Method: I will test this by resizing a desktop browser window beyond 1024px and visually verifying that the grid layout activates smoothly via CSS media queries.

Accessibility

- 3: Keyboard Bookings
 - Statement: When navigating the Booking/Contact page using only the Tab key, the interactive form fields and submission buttons must display a highly visible, high-contrast focus ring (minimum 3:1 contrast ratio) in a top-to-bottom order so that users with motor disabilities can confidently fill out inquiries without a mouse.
 - Test Method: I will test this by unplugging my mouse and using only the `Tab` and `Enter` keys to successfully complete and submit the contact form.
- 4: Accessible Event Color Contrast
 - Statement: When displaying text descriptions over background colors or imagery on the Schedule page, all text elements (such as speaker names and drink pairings) must maintain a minimum contrast ratio of 4.5:1 for normal text and 3:1 for large text so that academics and older adults with low vision can easily read the event details.
 - Test Method: I will test this by running the automated WebAIM Contrast Checker tool against the live CSS color pairings of the text and backgrounds.

Browser Support & Fallback

- 5: Images Disabled Text Fallback
 - Statement: When high-resolution images of venue spaces or wine bottles fail to load or are disabled by the browser, the Home and About pages must render descriptive, semantic alternative text placeholders within the layout boundaries so that users on slow connections still understand what the media represents without breaking the surrounding layout.
 - Test Method: I will test this by using the Web Developer browser extension to disable images, verifying that the text alternatives display clearly and preserve the page structure.

Performance

- 6: Fast Hero Media Paint
 - Statement: When a user first loads the Home page, the above-the-fold banner image must render completely in under 2.5 seconds by utilizing modern compressed web formats (.webp) and explicit sizing attributes so that impatient visitors do not leave due to a blank screen.
 - Test Method: I will test this by running a Lighthouse performance audit in Google Chrome and checking the specific metric score for Largest Contentful Paint (LCP).

Metadata & Discoverability

- 7: Unique Page Titles and Descriptions
 - Statement: When a user looks at their browser tab or searches for the site on Google, the HTML `<title>` tag and `<meta name="description">` tag must change to match the specific page (e.g., "Upcoming Lectures | Wine & Wisdom" vs. "About Us | Wine & Wisdom") so that the user always knows exactly which page they are viewing and search engines can show accurate preview snippets.
 - Test Method: I will test this by opening each of the 5 pages in a browser and checking that the tab text changes correctly, then viewing the page source code to confirm the unique meta description is present.

Release Quality

- 8: Semantic HTML and Link Integrity
 - Statement: When the entire website is deployed to a live staging environment for final review, all pages must contain 100% valid semantic HTML5 syntax and zero broken internal anchors or external links so that neither automated web crawlers nor human visitors encounter broken pages or standard 404 errors.
 - Test Method: I will test this by running the entire production URL through the W3C HTML Validator and a batch link-checking tool (like auxiliary link checker extensions).

AI Disclosure

Purpose: Used an AI assistant to brainstorm engineering acceptance criteria templates, organize a web development project brief, and structure a planning package.

Outputs Considered: Reviewed structured software testing templates for responsive layout systems, web accessibility validation parameters, and semantic metadata structures.

Verification: Verified that all 8 acceptance criteria met the requested custom template formatting, were testable via standard developer testing tools, and required zero JavaScript. Also verified the general content inventory.

Content Inventory

ID	Content Item	Purpose	Format	Source/Owner	Status	Risk or Note
C1	Operational & Event Hours	Inform visitors when events occur	HTML Text	Event Coordinator	Ready	Doors open at 6:30 PM, lectures start at 7:00 PM.
C2	Lecture Schedule	Inform people of bi-monthly events	HTML Text	Speaker Liaison	Ready	Events happen twice per month on Friday nights.
C3	Workshop Topics & Times	Educational lecture details	HTML Text	Education Lead	Outdated	Schedule conflict between 7:00 PM and 7:30 PM times.
C4	Layout & Amenities	Explain physical venue setup	HTML Text	Facility Lead	Ready	Highlight accessible entrance and

ID	Content Item	Purpose	Format	Source/Owner	Status	Risk or Note
						lounge seating.
C5	Transit & Parking	Guide visitors to the venue	HTML Text	Venue Management	Missing	Parking validation details need official confirmation.
C6	Event Photography	Visual appeal and engagement	.webp Image	Media Vault	Risky	Imagery exists but licensing and alt-text are not ready.
C7	Beverage Partnerships	Detail featured wineries/breweries	HTML Text	Sommelier / Partner	Ready	Showcases local rotating drink menus.
C8	Basic Contact Fields	Collect name and email	HTML Form	Web Admin	Ready	Built inside standard HTML <form> scope.
C9	Engagement Interests	Segment lecture theme preferences	HTML Form	Event Coordinator	Ready	Checkboxes for topics (History, Science, Art).
C10	Access Needs Field	Gather accommodation requests	HTML Form	Accessibility Lead	Ready	Text area field; avoid collecting private health details.
